Tile servers (administration)

In this section of PMA.studio's administrative portal, you can manage the different PMA.core instances that are used by PMA.studio to retrieve content from.

PMA.studio (PMA.view) does not function without connectivity to a PMA.core tile server. If you want to learn more about what a tile server is, we have a YouTube video on this topic.

This page lists down different types of servers used by PMA.Studio including PMA.core, PMA.search, PMA.start, My Pathomation and PMA.live.
