

What is PMA.start

PMA.start is a free desktop-based viewer. Do you want to read whole slide images (WSI) or other digital microscopic images from your hard disk or local computer? PMA.start can do the job.

PMA.start is our free windows desktop application that allows you not only to view your digital images on your own computer, but also process them in image analysis software like ImageJ. In addition, we provide an API and SDKs for Python, PHP, and Java.

For more info and to try this on your own, visit <http://free.pathomation.com>.
