2025/11/30 11:11 1/2 Setting Up a Session

Setting Up a Session

Previously if you wanted to work with slides for a biomarker training or consensus scoring you'd need a full briefcase with exemplar slides for all your participants per indication/biomarker, forms, case information... and that's before you even begin to consider the microscopes!

Training Sessions were designed to completely eradicate these difficult and costly logistical hurdles. A standard training session contains everything you need to train other pathologists, reach a ground-truth consensus, collect annotations from experts around the globe, or validate an Al algorithm - ask pm@pathomation.com for information on any of these or to outsource setting these up.

A Training Session contains:

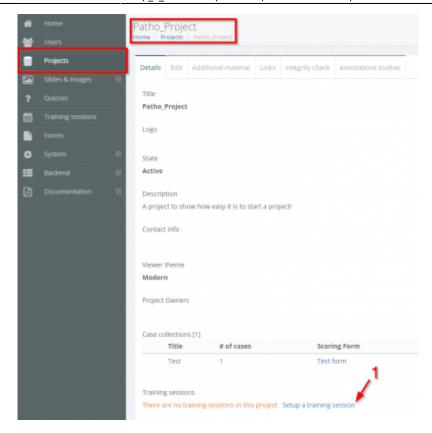

- 1. All your participants
- 2. The ability to invite and/or contact all of them at once
- 3. Tracking of email invitations and logins
- 4. Forms to capture the data from the participants
- 5. Supplementary info e.g. manuals / interpretation guides (videos, powerpoints, pdf's, etc)
- 6. Case collections ('slide boxes') which all your participants can see at once
- 7. Consensus scores
- 8. Optional Annotations made either by the Supervisor, and/or by the Trainee Participants

Walkthrough

This video will get you started:

pathotrainer setup training session.mp4

You will also see a bluetext prompt to create a Training Session when viewing a Project that does not yet have a Training Session

Well done! You've created your first training session. Now it's time to add participants or put on some finishing touches
