Version retrieval (automation)

For monitoring purposes, it is useful to determine the PMA.studio version used through a back-end API call. All of Pathomation's platform components have this option, actually.

In order to determine the installed version of PMA.studio, you can issue the call:

`https://server/pma.studio/api/json/getversioninfo`

The result is a JSON string formatted as `A.B.C.D`, with A, B, C being numeric. D can be either numeric or alphanumeric.

Reporting this version number to Pathomation when asking for support through our helpdesk is always helpful, too.
