

## About PIMS LS: PIMS for Life Sciences 3.3.0

Welcome to PIMS LS (formerly PMA.studio), an integrated web-based environment for whole slide image (WSI) data, digital pathology, and virtual microscopy alike, developed by [Pathomation](#).

With PIMSLS Pathomation has developed a true cockpit for imaging scientists and histopathologists.

The user is not locked into a fixed user interface - customization is a key characteristic of PIMSLS and the philosophy underpinning it's development.

Guided by user experience and feedback, PIMSLS provides standard features which are considered essential and that should not be changed, but apart from those, the [user interface](#) can be extensively customized both by daily users - by pulling in different panels.

Whether you're looking to annotate slides, integrate distributed heterogeneous databases with your slides, or are looking to host collaborative long-distance tele-conferences, Pathomation's PMA.studio is a true cockpit for the pathologist and (imaging) research scientist alike.

PIMSLS hosts a slew of innovative features:

### Annotations

PMA.studio comes with an Annotations panel where you can review and manage annotations for specific slides, You can draw your own annotations of different shapes. You can then export your annotations to a number of popula formats.

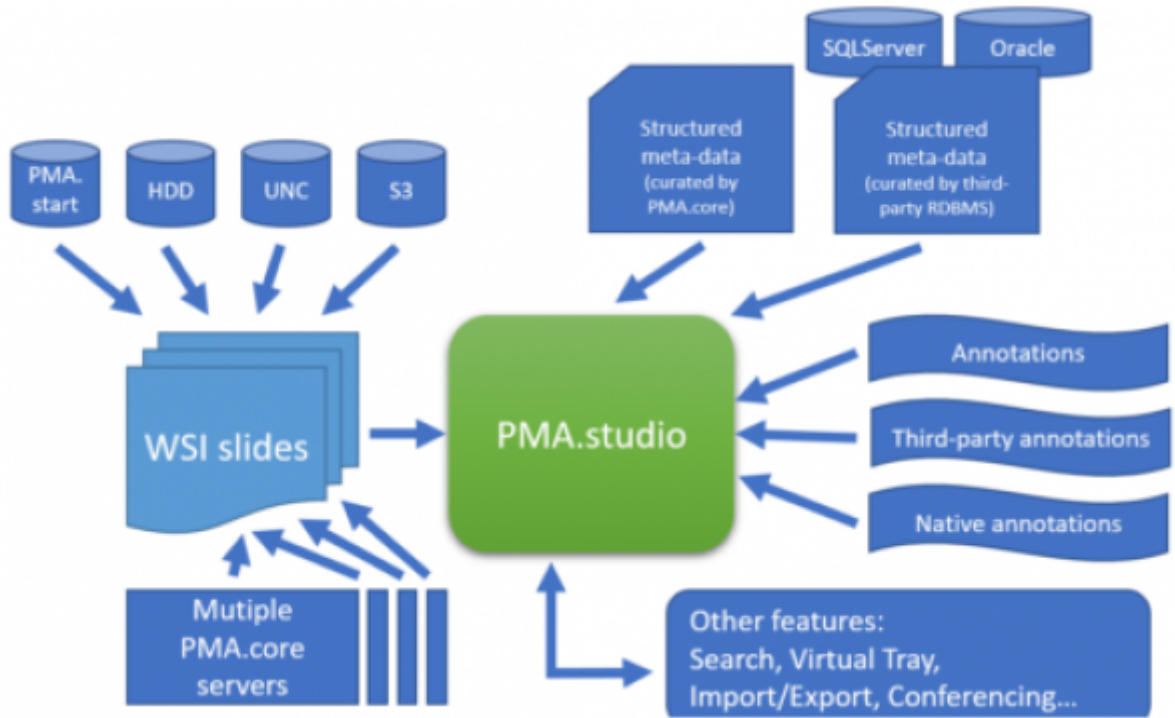

### Data management

Digital pathology involves more than just whole slide images. Oftentimes supplemental data is available in external data stores. These data stores can be consulted in addition to the image data itself. We call it "integrated pathology"
