

Optimize the viewing area for one or more slides

When looking at slides, you often want to devote as much screen space your [viewport](#) as possible.

Since both PMA.studio and PMA.vue are web applications, a simple way to accomplish this is by maximizing your webbrowser window, or even having it run in full-screen mode (typically invoked by pressing F11).

There are a couple of things within the application itself, too, that you can exploit for optimal slide viewing.

Maximizing

Popping out individual slides
