

# Meta-data

With meta-data, we identify all data that surrounds a slide, but that is not graphical. The actual pixels (or viewport representation) of a slide are *not* meta-data. [Annotations](#) can be considered meta-data in the semantic sense, but they're link to graphical activities as well. So [annotations are discussed elsewhere in this manual](#).

There is [a blog article](#) that serves as a complementary tutorial to this blog entry. In [the article](#), we consider 3 types of meta-data in PMA.core:
