

Configure user accounts

Add new user accounts

To add a user click on the “Add” button on the top right of the table.

The following fields can be defined for each user:

A screenshot of the 'Add user' form. The form has a title 'Add user' and a breadcrumb 'Home > Users > Create'. It contains several input fields: 'First Name', 'Last Name', 'Login', 'Password' (with a 'Generate' button), 'Confirm password', 'Email', and 'Description'. At the bottom, there are three checkboxes: 'Administrator', 'Can Annotate', and 'Suspended'.

Field	Description
First Name	The user's first name
Last Name	The user's last name
Login	The username, it must be unique irrespective of its casing, if “UsEr” exists “uSeR” cannot exist
Password	The user's password
Confirm Password	Insert the password again for confirmation
Generate Password (button)	Auto-generates a password, according to pre-set conditions
Email	The user's email. Must be unique if the corresponding server setting is enabled
Administrator	Whether the user is an administrator, can login to the administrator UI and use the Admin API
Can Annotate	Whether the user can create new annotations on slides
Suspended	Whether the user is suspended, i.e. cannot authenticate and perform any action on the server

Modify user accounts

After creating a user you can click on the *Edit* button to modify an existing user. The page and fields are exactly the same as the *Create User* page (see previous paragraph). The only difference in this page is the ability **to leave the password/confirm password fields empty**, and the server will not change the user's password.

Other actions

Clicking on the down arrow in the user's list page you can see additional actions that can be performed on a user. Those actions are:

- Remove: This action will delete the user
- Remind password: Will send an email to the user with his password
- Reset password: This will set a new random generated password for this user and then sent an email containing the new password
- Unlock: Unlocks a locked out user, after too many unsuccessful login attempts ([see user states](#))

Audit trailing

Clicking on the Audit Trail tab of a user will display a chronological list of all changes performed to a user, as well as all changes performed to the access list of that user ([see access control lists](#))

This list contains the following useful info about a change in chronological order:

- ActionType: The type of a change i.e. whether the user was created, updated or deleted
- EventDate: The date the change occurred
- UserLogin: The user that performed the change
- List of user's field: The previous value for this user, and the changed value

Activity Log

Clicking on the Activity Log tab will display a comprehensive list of all activities performed by the user over time. There are four sections in this page each displaying the following information:

- System Access Log: The authentication's performed by the user, successful or not. If it was successful the session id will be also displayed
- Slide Access Log: All slides that were accessed/viewed by the user along with the date, slide path and name
- Form Access Log: The form's and form data that were accessed by the user
- Latest events: all logged events for this user ([see events](#))
