

Image settings

In the image settings section image compression and tile related values can be configured.

Image settings

The 'Image Settings' page has a breadcrumb 'Home > Image settings'. It features three tabs: 'Image Settings' (active), 'Cache Settings', and 'Barcode Settings'. Under the active tab, there are three fields: 'Tile Size' with a value of 512, 'Image Format' with a dropdown menu set to 'Jpeg', and 'Tile Quality (100=best)' with a value of 90. A 'Save' button is located at the bottom right of the form area.

Field	Description
Tile size	The size of each side of the served tiles in pixels. A value of 400 indicates that resulting tiles will be 400 x 400 pixels in size
Image format	The image format for all the served images (tiles, thumbnails, snapshots etc.). This can be JPEG (lossy compression) or PNG (lossless compression)
Tile quality	A value in the 1 to 100 range. This number defines the image quality for lossy compression schemes. Default value is 100 (equal to 100% quality). The parameter does <i>not</i> apply when the image format is set to PNG. See what impact this has on data traffic.
