

User monitoring

Overview table

- The “Last login” column displays each user's last successful login date.
- The “Local” column indicates whether or not a user is managed by PMA.core or LDAP.
- The “Administrator” column indicates whether or not a user can access PMA.core. Non administrator users cannot perform system management tasks within PMA.core.
- The “Can Annotate” column indicates whether or not a user is allowed to create and edit annotations.
- The “Suspended” column indicates whether or not a user is currently allowed to login to either PMA.core or downstream applications. A suspended login is treated as invalid by the system.
- The “Locked out” column indicates whether or not a user is currently locked out due to consecutive invalid log in attempts.
- Clicking on a user's email address launches your default email client.
- Clicking on a user's login name displays a summary of the user's activity.

Next to each entry the following buttons appear:

Button	Description
Edit	Edits the selected user; this option allows the modification of the user's password, email and name. Furthermore the access level of the user can be changed (administrator or not) as well as whether or not the user is allowed to create and manage annotations . Finally a user can be (un)suspended via this option
Delete	Deletes the selected user
Remind password	Sends a notification email to the selected use that contains their password in plain text
Reset and remind password	Sets a random password for the selected user and sends them a notification email that contains the new password in plain text
Unlock	Lifts a lock-out

User details view

By clicking on the user's login in the overview table, you can see a summary of the user's settings and activity. This page provides an overview of the user's information and the root directories they can access.

Private root-directories

No private root-directories defined.

Access rights

The Access rights (ACL) section allows control over the private root directories the particular user may access. If no private root directories are defined, this list will be empty.
